Introduction:

Human parasites are an eternal health problem with all living organisms. Nature provides that all living creatures have natural parasites as a way of insuring “survival of the fittest.” Treating with Poisons is the mainstream method of choice and can not work for the simple reason that poisons kill. With parasites we want the blood stream empowered to kill the bad parasites and keep them under control at all times.

The goal of this essay is to explore and educate those so interested in what goes into making an effective and exceptional Anti Parasite/De Worming formula, and in doing so to understand what being WORM FREE really means. No one finer to learn from than a Master Herbalist with in excess of 15 years of experience making herbal parasite formulas that work, based upon evidence seen.

The use of herbs is a method to supply the blood stream / immune systems with essential plant minerals and chemicals that the liver / blood "uses" to create the immunity required to kill the parasites twenty four hours a day, seven days a week. Our bodies are in need a balance of good and bad bacteria but not "worms". Worms are destructive and of no value to us.

In our fast paced world it is the norm to seek a quick fix. Those seeking a one time treatment without considering the whole, will always fail within the realm of parasite.

A Short Modern History Of Parasite Cleansing

The world was re-introduced to the subject of parasites a few years ago with the Dr Hulda Clark series of books. Dr Clark was one of the first people to write and publish her own books on the subject and thus introduced the average person to the subject of human parasites. It was Dr Clarks efforts and books that ignited within the average person the desire to de-worm.

The Master Herbalist who formulates our herbal formulas had spent more time self experimenting with parasite issues than any man alive, and thus could prove or disprove their existence based upon his herbal use, observations and experiments.

The Clark book mentioned three basic anti parasite herbs that made up their formulae. These three herbs were Walnut, Wormwood and Clove. These formulae's were sold at hugely marked up prices and in those small dose one would be lucky to de-worm a cat let alone get to the bottom of the parasite problem in a human.

A bed of Premium Wormwood.

One of the above mentioned herbs is Wormwood. Most internet sites or books usually show a picture of commercial ornamental flower garden Wormwood which is not the wormwood that is effective against parasite. Thus it leaves us doubt what Wormwood is actually being used in these commercial formulas.

A good herb can be defined by being able to use every part of that plant or tree to make it. And so too with the Black Walnut tree. To make a good de-wormer every part of the Black walnut tree is used. The secret to a truly exceptionally and effective formula lies in knowing which parts and when to be used in this formula.

The Clark books explain that the walnut or fruit of this tree is to be used when mature, on the ground, and black in colour. As we have come to learn, to use this would make an anti fungus herbal formulae or a herb used to stain a steel animal traps, but not effective against parasites or to be taken internally, unless understood how to make it properly.

A 1952 German study of the Black Walnut tree and its uses for parasites proved that the mature walnut to be the weakest part of the tree. If the nuts had any dark spots on them, they were worthless.

The German study went on to explain that the male bud at the top of the largest male trees was the superior source. It also pointed to an exact time when the male buds needed to be harvested and if left beyond day they first appeared, the anti parasite potential would be weaker and weaker as time goes on.

The actual walnut fruit was considered a poor source of anti parasite properties, unless it was very immature. It explained that the extracted chemicals must be kept in an acid solution or they would be ineffective and the proper method was to add Raw Apple Cider Vinegar the hour the Walnut Buds were harvested.

The Clark method used Vitamin C powder as the acid. This German method was explained to Ms Clark as being superior, however she chose to keep the text in her books the same.

Most people selling Black Walnut Tincture or a combination of walnut/wormwood/ clove have done so based on the Clark range of books. The use of dry/dead wormwood and powdered clove capsules, etc. is an inferior method that person could do for those that are seeking herbs as a natural aid for removal of parasites.

The use of Vitamin C is highly questionable at best and toxic at worst.

Background:

Many herbalist disregard the possibility of parasite unless the symptoms are acute. They simply don't understand the true extent of the challenge on hand. Aside from that, just as per the medical profession, the parasite issue if not dealt with ensures a return customer.

On the rare occasion when a herbalist is encountered who uses parasite herbs they are usually of the toxic kind and the individual is cautioned that this intervention is only for a short period due to the toxic nature of the herbs.

Such herbalist have no idea what it takes to be worm free. Very few understand that at very least that you need to De-Worm for no less than thirty days, and then be proactive with a maintenance routine there after to remain worm/parasite free. The sources of re-contamination or endless. Pets, Sushi, pork, raw meat, jerky to name but a few.

Medically they know even the use of chemo can't kill all the parasites and even if they could, they would kill them too fast with such toxic methods the person could die in their own trapped waste.

There is a lot of information about parasites on medical web sites at colleges and Government data bases proclaiming death rates by the year in every country. Only in the oldest of medical books will you read of the cure for such parasite problems. The herbal approach has lost its luster over the years in favor of the faster yet toxic approach.

Today the use of drugs can not control parasites and all toxic substances always makes for more and more parasites, so you don't find doctors talking much about parasites. There is no point in promoting something you have no cure for.

A War on Parasite Herbs

An investigative friend had been doing some family research and going through old newspapers covering the period of time between the late 1880s to 1920. During this period there are many advertisements or ads in these papers advertising herbal elixirs. What stands out during this period gives us a small missing clue as to when human health was hijacked by Medical Industrial Complex.

The key word standing out during this period is "emodin-bearing herbs". Emodin bearing herbs STOP parasites from hatching and continuing into larva inside the human body. Historically these herbs were known about and mentioned but currently the latest scientific documentation is that in America at

least, these are only listed as Chinese herbs. When one digs a little deeper and searches historically we found at least 7 of these herbs.

This emodin bearing herbal information has been covered up over a 100 year period. The FDA and the AMA have judgements against any herbal elixir and if one were to read through the legal documents one will notice that its because they are emodins. They kill Cancer and the kill parasite eggs and larva. The FDA and the AMA wanted any herbal formula that had emodin bearing herbs in them REMOVED 100 years ago.

These herbs were noted as, but not limited to Aloe, Buckthorne, American Mandrake, Rhubarb, Turkey Rhubarb, Cascara, Sheep Sorrel, Cloves

The Black Walnut Tree

The Black Walnut Tree is found growing abundantly in certain part of the US and Europe. Experience shows that some years the male bud rarely appears and in other years is abundant. In general there is maybe one male Walnut Tree for every six female trees.

The 1952 German report indicated that the largest Male Buds are on the tops of the largest trees, which is presumably Nature's way of allowing the winds to blow the spores across to reach the female trees. The largest trees grow over 60 feet tall and the buds grown on the North side are considered to have the best de-wormer quality. Many techniques are employed to encourage the male tree to make more powerful and potent male buds in an effort to reach the female tree.

One such method would be to trim the Male Trees to encourage new growth and buds. Another technique would be to cull the nearby female trees and so encourage a stronger more potent bud. For it is the bud that contains the most powerful of anti parasite properties.

There is a single prime day when it is best to harvest the male buds. To gain access to the PREMIUM PART of the Black Walnut Tree, the male bud MUST be harvested at a very specific time, and that is as soon as possible after the male bud has appeared. In reality the herbalist would have 1-2 days to achieve this.

To do this special equipment is required such as a "Cherry Picker", that would allow access to these buds situated high up in the trees.

A tincture solution from the Male Bud of the Black Walnut Tree.

The male bud is harvested in sufficient quantities to process 100 gallons. This one hundred gallons is then left untouched in a dark corner to age. When the quantity has reached 12 years of age it is deemed to be excellent. When dealing with certain forms of herb, when made correctly they can last for over a hundred years, and each year as they become older in theory they become better.

The Black Walnut itself cannot be dried or extracted in a non-acid liquid or the anti-parasite chemicals will not keep.

Considering these few facts, it is easy to see why no one else does it correct, ONLY someone who is absolutely passionate about making the very best. Only a Master Herbalist would go to these kind of efforts.

Chances are good the Black Walnut products sold commercially are made with the wrong parts of the tree, harvested wrong, preserved wrong, bottled wrong, sold wrong and used wrong.

The customer that used these inaptly made products only got to receive a very small percentage of the potential of what the whole herbs had to offer as nutrition.

This picture shows the tops of the tree have been cut off to collect the best male buds.

By topping the male trees the absolute Prime male buds are harvested and this forces the trees to make stronger and stronger chemicals each year in an effort to mate. These "topped" buds are literally the cream of the crop.

The female trees also will react to not having enough males and will alter each year again in an effort to produce a fertile walnut.

Immature Black Walnut

The best possible walnuts fit easily into the palm of the hand and not the suggested old walnuts in the Clark books. It takes hundreds of these to fill a bucket and again, only a Master Herbalist would go to this kind of effort.

Cloves

The Dr Clark books are about the only source one will find referring to the use of cloves as a de-wormer. In her books Dr Clark states that the use of Cloves is an aid in the elimination of parasite eggs. If nothing else the Cloves gives the De-Wormer Formula a pleasant flavor. The Clark books explains once the Clove is ground in air and put in a capsule it loses its ability as an anti-parasite herb, yet she then only has the reader consume old clove capsules! The Cloves used in our De-wormer are the best available organic quality are ground in liquid and not the air to form a powder for a capsule.

Olive Leaf

Like the Black Walnut Tree, the Olive Leaf Tree also can be used from top to bottom for many things. Dr. Morton Walker wrote an excellent book on the Olive Leaf Tree called; "Olive Leaf Extract", and explains controlling everything from bacteria/virus control to a cure for Parkinson's, HIV, etc. and just about all viral/bacterial diseases with Olive Leaf. He went on to state that tests showed that it was as safe as drinking water to consume.

Experiences shows that Olive Leaf is truly the KING of HERBS and for this reason included in the making of an exceptional de-wormer.

Pumpkin Seeds

Dr Clark along with many herbal books makes mention of pumpkin seeds as having anti-parasite qualities. They are best known as a children's de-wormer when eaten raw. To round the De-Wormer Formula out Pumpkin Seeds have been included.

Raw Apple Cider Vinegar

In keeping with the German Scientist study of sixty years ago, only Raw Vinegar is used and not the Vitamin C chemical powder as suggested by the Clark books.

Apple Cider Vinegar is sourced from one of the last remaining true Amish Apple Orchards. This orchard keeps a few thousand gallons of vinegar in various stages of development in stock. A three year old Vinegar is used. Along with this a Vinegar that is over three generations old. This 100 year old vinegar is particular powerful tasting. The two are mixed and placed in a tank. This way the 100 year old vinegar is always part of the mix in the tank. Taking it one step further a unique Pineapple Vinegar is also added.

Pineapple Vinegar dates back in history as one of the best vinegars possible. Not only does it aid in keeping the heart and veins clean, and it also is one of the best herbs to aid in removing heavy metals such as lead.

Decades back Dr. Morton Walker searched the world over for people who lived well past age 100 and he noted one thing about people who lived long and consumed pineapple - "they all had extremely low lead levels".

Thus the vinegar used in this formula is one of the rarest forms of vinegar on earth.

For well over 16 years, the Syrup/Tincture de-wormer formula with the above 5

herb mixture of Black Walnut Tree, Olive Tree, Worm wood, Cloves and Pumpkin seeds in a unique blend of syrup and tincture extracts has continued to produce exceptional results world wide for both Adults and Children.

Not a Syrup and Not a Tincture

The above method came in the wake of a forty day fasting experience. The method is held in secret and no one has yet to copy it successfully.

The formula is not a syrup, nor is it a tincture, it is unique combination allowing the best qualities of both a syrup and a tincture. This worked out so well that all in house non-tincture formulas are now made this one way. The main herbs determine the name given to the formula and the actually formula is used to supply the liver nothing more than plant based nutriment/minerals allowing it to do the desired job.

The Prize of Experience is Perspective

To read about parasites and the herbal methods at removing them is one thing, to prove such things are a totally different situation few if any have ever attempted. The man who created these herbal formulas spent about three years looking at the results of liver flushes from a large variety of people who were all using the parasite formula.

Most had no prior experiences with parasites and liver flushing. There cant be too many people who makes herbal formulas and also investigated the results of using the herbs. This was done to prove perfect the formulas.

His finding led him to believe that just about all the parasite information available today is tainted at best or at worst false so as to promote and sell herbal products that actually have little value because the formulas were made incorrectly or the doses were wrong.

During these experiments with Parasites an inexpensive computer microscope was used. Parasites are best seen while doing a Liver Flush. Herewith a few of the better pictures noted. A few of these people were educated to look at their liver flush results, which were then collected in large buckets.

The results of eight individuals liver flush were collected in eight large buckets. The contents sorted and examined under a microscope. They were quite amazed to see certain worms coming from certain diseases. The stones were separated from each bucket to show each person along with the microscope pictures of their worms and amount of eggs. This encouraged them to continue until the worms were gone and the stones would be removed along with the chaff as described in the Dr. Hulda Clark books

Stones from eight liver flushes.

The Pre Cleanse ensured that most of the intestinal worms were removed or eliminated in the days preceding the liver cleanse.

The first step of examining 8 Liver Flush buckets was to take out the stones, next would be the parasite, then the eggs and make a file for each person and compare the results after at least 3 liver flushes in a series. Color, amounts, their comments, experiences, their past problems, etc....all was required to get an understanding of Liver Flush results and most of all, proved or disproved the ability of the de-wormer product.

The contents of the liver flush were examined, and separated.

The greatest failure of every so called Longevity Expert was their lack of interest in Parasites. Few herbalists ever even mention them in their books and have no experience seeing the real worms.

Parasite as viewed under a low powered microscope –Mother and Eggs

Some parasites are big enough to be seen with the naked eye.

After three years he was not seeing any new parasites so he stopped looking having seen all he needed to see. These three years allowed the Parasite Formula to be refined and improved into what it is today known as PW and PWA.

Junior Parasite Syrup/ tincture (16 Oz bottles)

This preferred formula is called Junior Parasite Cleanse. The Junior formula was the first De-Wormer herbal formula that could be used for children. For the past 16 years, this has been the number one product. Adults have used it for 16 years and some suggest it is as strong as anyone would want to use.

The adult version is called the [Adult Parasite Cleanse](#) and adds 30+ herbs from old herbal books and any herb in historical use for lymes disease, swine flue, etc. These are adult use herbs only and not suitable for children.

Adult Parasite Cleanse
